

etiology of noncarious cervical lesions

etiology of noncarious cervical pdf

Abfraction is a theoretical concept explaining a loss of tooth structure not caused by tooth decay (non-cariou cervical lesions). It is suggested that these lesions are caused by forces placed on the teeth during biting, eating, chewing and grinding; the enamel, especially at the cemento enamel junction (CEJ), undergoes large amounts of stress ...

Abfraction - Wikipedia

The non carious cervical lesions (NCCL) are considered frequent defects, characterized by an insidious unfolding, and controversial aetiology.
