## grid and cluster computing pdf

Grid computing is the use of widely distributed computer resources to reach a common goal. A computing grid can be thought of as a distributed system with non-interactive workloads that involve a large number of files.

Notes. Scalability: Because this implementation uses a flat kernel and a Ball Tree to look up members of each kernel, the complexity will tend towards  $O(T \cdot n \cdot \log(n))$  in lower dimensions, with  $n$  the number of samples and  $T$  the number of points.
